EXPLANATORY NOTES

This report, appearing as a separate publication for the first time, was formerly published as Appendix II, "Alphabetical List of the Products Reported as having been Manufactured in Canada", in the "General Review of the Manufacturing Industries of Canada" (Catalogue No. 31-201). Publication as a separate report will, it is hoped, enhance its usefulness and permit its release in advance of the more comprehensive "General Review".

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of factory shipments" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of the Bureau's Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1961** regardless of whether manufactured in 1961 or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries such as construction and wholesale trade whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1961. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*. Another reason for the greater values of some products than originally published in various 1961 reports of the "Manufacturing Industries of Canada" series is the inclusion of products from two new industries (Poultry Processors and Dental Laboratories) and three new groups of establishments (book publishers in the Publishing Industry, electro-plating establishments in the Metal Stamping, Pressing and Coating Industry, and prescription branches in the Ophthalmic Goods Manufacturers Industry). These new industries and groups of establishments will be included in revised data on principal statistics for 1961 to be published in the relevant 1962 reports of the "Manufacturing Industries of Canada" series.

Arrangement and Identification of Items

Pending implementation of the Standard Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This

means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in DBS reports, "Imports by Commodities" and "Exports by Commodities", which are now based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture and machinery groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

While every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value of the list for most purposes. In total, the value of such products was \$463.9 million, representing less than two per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns but which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by footnote 1 and are included in total, by industry group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$873.9 million, of which the chemical and chemical products group accounted for \$293.0 million; food and beverages, \$120.4 million; and transportation equipment, \$106.9 million.

While efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

EXPLANATORY NOTES

Changes in this Report

The use of computer print-out for this report has necessitated certain changes—in particular, the transfer of all footnotes and symbols to a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., “mens” for “men’s”). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the “value of shipments of goods of own manufacture” concept used in the Bureau’s annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of the Bureau’s Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1962** regardless of whether manufactured in 1962 or earlier. Goods purchased for re-sale are specifically excluded from this report.

“Canadian manufacturers” as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special “Commodity Schedule” listing details of products of own manufacture sold or shipped in 1962. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

¹ Standard Industrial Classification Manual (Catalogue No. 12-501), Dominion Bureau of Statistics, 1960.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in DBS reports, “Imports by Commodities” and “Exports by Commodities”, which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under “Clothing”, for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the “All other products, not specified” category following the alphabetical list of products in this report. It is obvious, therefore, that this “not specified” category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of “not specified” products to individual items although it is not considered serious enough to distort the value

of the list for most purposes. In total, the value of such products was \$563.6 million, representing 2.1 per cent of the aggregate value of shipments.

779.4
156.8
In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to ~~\$779.4~~ ^{827.8} million, of which the chemical and chemical products group accounted for \$238.3 million; food and beverages, ~~\$156.8~~ ^{136.8} million; and transportation equipment, \$111.1 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishments classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in the Bureau's Subscription Order Form, available without charge from the Information Division, Dominion Bureau of Statistics, Ottawa, Ontario.

EXPLANATORY NOTES

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of shipments of goods of own manufacture" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of the Bureau's Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1963** regardless of whether manufactured in 1963 or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1963. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in DBS reports, "Imports by

Commodities" and "Exports by Commodities", which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

The use of computer print-out for this report has necessitated showing all footnotes and symbols in a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., "mens" for "men's"). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value

¹ Standard Industrial Classification Manual (Catalogue No. 12-501), Dominion Bureau of Statistics, 1960.

of the list for most purposes. In total, the value of such products was \$691.7 million, representing 2.3 per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$957.4 million, of which the food and beverage industries accounted for \$304.2 million; chemical and chemical products, \$241.3 million; and transportation equipment, \$111.6 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishments classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in the Bureau's Subscription Order Form, available without charge from the Information Division, Dominion Bureau of Statistics, Ottawa, Ontario.

EXPLANATORY NOTES

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of shipments of goods of own manufacture" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of the Bureau's Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1964** regardless of whether manufactured in 1964 or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1964. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in DBS reports, "Imports by

Commodities" and "Exports by Commodities", which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

The use of computer print-out for this report has necessitated showing all footnotes and symbols in a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., "mens" for "men's"). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value

¹ Standard Industrial Classification Manual (Catalogue No. 12-501), Dominion Bureau of Statistics, 1960.

of the list for most purposes. In total, the value of such products was \$721.2 million, representing 2.3 per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$1,321.0 million, of which the food and beverage industries accounted for \$344.3 million; chemical and chemical products, \$337.6 million; and transportation equipment, \$145.8 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishment classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in the Bureau's Subscription Order Form, available without charge from the Information Division, Dominion Bureau of Statistics, Ottawa, Ontario.

CHANGE IN VALUATION OF SHIPMENTS AND REVENUES, SMELTING AND REFINING INDUSTRY, 1961-64

A basic change in the method of valuation of shipments and other revenue in the smelting and refining industry in the 1964 Census of Manufactures has resulted in a significant break in continuity with data previously published for the industry in this and other DBS reports. However, shipments and revenues have been re-calculated on the new basis for the 1961-63 period to provide a three-year overlap of the two series as shown below.

The new basis of valuation treats the smelting-refining operations of integrated companies as "custom" establishments whether the ore comes from within the company or from another source. The value of the recoverable metal content of own ores processed by integrated companies, formerly credited to the smelting and refining industry, now accrues only to the mines concerned and is not duplicated, as in the past, in both the mining and the smelting and refining industries. Revenue of smelting and refining companies which are not integrated with domestic mining operations continue to be treated in basically the same manner as formerly. A more complete account of the change in basis of valuation in the smelting and refining industry is included in the 1964 issue of "Smelting and Refining" (DBS Catalogue No. 41-214).

Readers who wish to revise shipments data for the smelting and refining industry in the 1961-63 issues of "Products Shipped by Canadian Manufacturers", on the same basis of valuation as used in 1964, may do so by using the following data:

	Originally published	Revised
1961	\$1,452,756,540	\$598,834,000
1962	1,530,372,216	630,322,000
1963	1,524,688,474	621,541,000

Both original and revised data **exclude** the commodities enumerated in the footnote to the item "smelting and refining" in the relevant years.

EXPLANATORY NOTES

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of shipments of goods of own manufacture" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of the Bureau's Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1965** regardless of whether manufactured in 1965 or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1965. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in DBS reports, "Imports by

Commodities" and "Exports by Commodities", which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

The use of computer print-out for this report has necessitated showing all footnotes and symbols in a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., "mens'" for "men's"). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value

¹ Standard Industrial Classification Manual (Catalogue No. 12-501), Dominion Bureau of Statistics, 1960.

of the list for most purposes. In total, the value of such products was \$777.2 million, representing 2.2 per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$1,342.2 million, of which the chemical and chemical products industries accounted for \$385.5 million; transportation equipment, \$293.7 million; and primary metals, \$137.1 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishments classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in the Bureau's Subscription Order Form, available without charge from the Information Division, Dominion Bureau of Statistics, Ottawa, Ontario.

EXPLANATORY NOTES

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of shipments of goods of own manufacture" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of the Bureau's Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1966** regardless of whether manufactured in 1966 or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1966. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in DBS reports, "Imports by

Commodities" and "Exports by Commodities", which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

The use of computer print-out for this report has necessitated showing all footnotes and symbols in a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., "mens" for "men's"). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value

¹ Standard Industrial Classification Manual (Catalogue No. 12-501), Dominion Bureau of Statistics, 1960.

of the list for most purposes. In total, the value of such products was \$924.5 million, representing 2.4 per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$1,550.0 million, of which the chemical and chemical products industries accounted for \$409.1 million; transportation equipment, \$289.0 million; and primary metals, \$209.2 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishments classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in the Bureau's Subscription Order Form, available without charge from the Information Division, Dominion Bureau of Statistics, Ottawa, Ontario.

EXPLANATORY NOTES

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of shipments of goods of own manufacture" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of the Bureau's Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1967** regardless of whether manufactured in 1967 or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1967. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in DBS reports, "Imports by

Commodities" and "Exports by Commodities", which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

The use of computer print-out for this report has necessitated showing all footnotes and symbols in a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., "mens" for "men's"). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value

¹ Standard Industrial Classification Manual (Catalogue No. 12-501), Dominion Bureau of Statistics, 1960.

of the list for most purposes. In total, the value of such products was \$996.1 million, representing 2.5 per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$1,276.1 million, of which the chemical and chemical products industries accounted for \$422.9 million; transportation equipment, \$129.6 million; and primary metals, \$141.5 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishments classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in the Bureau's Subscription Order Form, available without charge from the Information Division, Dominion Bureau of Statistics, Ottawa, Ontario.

EXPLANATORY NOTES

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of shipments of goods of own manufacture" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of the Bureau's Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1968** regardless of whether manufactured in 1968 or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1968. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in DBS reports, "Imports by

Commodities" and "Exports by Commodities", which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

The use of computer print-out for this report has necessitated showing all footnotes and symbols in a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., "mens" for "men's"). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value

¹ Standard Industrial Classification Manual (Catalogue No. 12-501), Dominion Bureau of Statistics, 1960.

of the list for most purposes. In total, the value of such products was \$1,004.8 million, representing 2.3 per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$993.6 million, of which the chemical and chemical products industries accounted for \$331.7 million; primary metals, \$146.3 million; and transportation equipment, \$108.0 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishments classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in the Bureau's Subscription Order Form, available without charge from the Information Division, Dominion Bureau of Statistics, Ottawa, Ontario.

EXPLANATORY NOTES

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of shipments of goods of own manufacture" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of Statistics Canada Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent **quantities and values of goods of own manufacture shipped in 1969** regardless of whether manufactured in 1969 or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1969. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in Statistics Canada reports,

"Imports by Commodities" and "Exports by Commodities", which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

The use of computer print-out for this report has necessitated showing all footnotes and symbols in a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., "mens" for "men's"). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value

¹ Standard Industrial Classification Manual (Catalogue 12-501), Statistics Canada, 1960.

of the list for most purposes. In total, the value of such products was \$1,017.0 million, representing 2.2 per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$1,183.1 million, of which the chemical and chemical products industries accounted for \$369.6 million; primary metals, \$141.7 million; and transportation equipment, \$127.1 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishments classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in Statistics Canada Subscription Order Form, available without charge from the Information Division, Statistics Canada, Ottawa, Ontario

EXPLANATORY NOTES

Scope of the Report

Several important qualifications with respect to content, coverage and arrangement of the items listed in the report should be noted by the user. Although most of the items listed are commodities, services performed by manufacturing establishments, such as repairs, dyeing, shrinking, etc., are also included. The object of including such service items is to conform with the "value of shipments of goods of own manufacture" concept used in the Bureau's annual Census of Manufactures. This census, which applies to all establishments classified to the manufacturing industries (classes 101 to 399, inclusive, of Statistics Canada Standard Industrial Classification¹), provides complete coverage of operational activities and collects, among other items, detailed data on value and, where applicable, quantities of goods of own manufacture shipped as well as services provided. Data for all commodities represent quantities and values of goods of own manufacture shipped in 1966⁷⁰ regardless of whether manufactured in 1966⁷⁰ or earlier. Goods purchased for re-sale are specifically excluded from this report.

"Canadian manufacturers" as used in this report includes all of the establishments classified to the manufacturing industries mentioned above, i.e. those establishments whose principal activity is manufacturing, together with those establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special "Commodity Schedule" listing details of products of own manufacture sold or shipped in 1966⁷⁰. The inclusion of products shipped by this group of establishments results, of course, in a greater value of factory shipments than that reported by the manufacturing industries *per se*.

Arrangement and Identification of Items

Pending implementation of the Industrial Commodity Classification in the annual Census of Manufactures, the arrangement of the items, as in previous years, is basically alphabetical. This means that, in some cases, even using an alphabetic key, the commodities in the report are not directly comparable with those in Statistics Canada reports,

"Imports by Commodities" and "Exports by Commodities", which are based on the Standard Commodity Classification.

Although the arrangement of items is essentially alphabetical, certain exceptions have been made in the case of commodities in the clothing, electrical appliance (small), fabrics, food, furniture, machinery and some other groups. Under "Clothing", for example, are listed in alphabetical order all major items of wearing apparel except footwear, gloves and mittens, headwear and hosiery, each of these four appearing in its appropriate place in the main listing. Within the clothing and other groups, major items (e.g. coats, dresses, suits, etc.) have been listed in alphabetical order, but subdivisions in many instances have been arranged, in conformity with industry or traditional usage, by such criteria as chief component material, method of fabrication, and sex and age group of the consumer. The basis for arrangement of such sub-groups should be readily apparent in most cases.

The use of computer print-out for this report has necessitated showing all footnotes and symbols in a special column, the condensing of some commodity descriptions, and the omission of the apostrophe from certain possessive forms (e.g., "mens" for "men's"). For an explanation of symbols and units of measure, see facing page; for footnotes, see end of table.

Limitations of Data

Although every effort has been made to ensure complete coverage and unique identification of items included in the list, certain inherent limitations in the collection and presentation of the basic data should be noted. To avoid placing an undue reporting burden on respondents, the Bureau asks manufacturing establishments in each industry to report a specified list of products and to report separately any other large items not on the specified list. All other products shipped are reported in total only and are included in the "All other products, not specified" category following the alphabetical list of products in this report. It is obvious, therefore, that this "not specified" category may include items in the alphabetical list which were not considered of sufficient importance by individual establishments to be reported separately. It is impossible, of course, to estimate the effects of the non-allocation of "not specified" products to individual items although it is not considered serious enough to distort the value

¹ Standard Industrial Classification Manual (Catalogue 12-501), Statistics Canada, 1966. 1970

of the list for most purposes. In total, the value of such products was \$1,891.5 million, representing 4.0 per cent of the aggregate value of shipments.

In addition to those products not specified by the reporting establishment, there are a large number of items specified on individual returns which cannot be published without substantially revealing particulars relating to one or more establishments. Such items are identified by "x" in the "Footnote or Symbol" column and are included in total, by group, under the heading "Products for which data cannot be published" at the end of the list. In total, these amounted to \$1,778.3 million, of which the chemical and chemical products industries accounted for \$375.1 million; primary metals, \$250.9 million; and foods and beverages industries, \$223.3 million.

Although efforts have been made to avoid duplication in the listing of products, it is possible that essentially the same commodity produced in different establishments has been reported under different names, especially when such items were not on the "specified products" list and were "written in" by

the respondent. In such cases, the items would appear separately, or possibly in more detail than under another name, in the following list.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities shipped by establishments classified to different industries. Statistics on shipments of specific commodities from particular industries are issued in annual reports on those industries; such reports are normally issued well in advance of "Products Shipped by Canadian Manufacturers" as the latter cannot be compiled until commodity data are available from all industries. In addition, readers with an interest in particular commodities will find that individual industry reports sometimes give more detail on shipments from those industries—or from all industries—than it is practicable to include in this consolidated report. Titles of the more than 130 annual reports for individual industries are included in Statistics Canada Subscription Order Form, available without charge from the Information Division, Statistics Canada, Ottawa, Ontario

INTRODUCTION

Changes in Format

Major changes have been incorporated in the presentation of data in this publication. In previous years, the arrangement of product names in the report was essentially alphabetical. With the implementation of the Industrial Commodity Classification (I.C.C.),¹ a derivative of the Standard Commodity Classification, the arrangement is presented for the first time in I.C.C. code sequence. Although this significant change in sequencing has some disadvantages in one's ability to locate data on individual products quickly, it has the distinct advantages of grouping related products and of facilitating the use of these data in conjunction with those on imports and exports, which are similarly arranged.

A further change is the inclusion of data on shipments of products, by province, for the first time. These new tables will aid many users who, in the past, have been unable to obtain data on shipments at the provincial level. Finally, the report is produced for the first time in bilingual format.

Sources of Data

Commodity data published in this report are derived from returns of establishments surveyed in the Annual Census of Manufactures and from returns of selected establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special commodity questionnaire listing details of products of own manufacture sold or shipped in 1971.

Limitations of Data

Statistics Canada asks manufacturing establishments to report shipments of a specified list of products which are products common to the industry. The establishments are also asked to identify and provide information on any products which they shipped which are not included on the lists provided.

For small establishments and for some minor products of larger establishments, the values are reported in total only in an "all other" commodity class. Included in this "all other" category may be products which were specified on the questionnaire sent to the establishment, but which the establishment did not consider of sufficient importance to record separately.

Présentation modifiée

Cette publication renferme des modifications importantes concernant la présentation des données. Dans les années précédentes, la disposition des noms de produits dans la publication suivait essentiellement un ordre alphabétique. Avec la mise en oeuvre de la Classification des produits industriels (C.P.I.)¹, qui dérive de la Classification type des produits, la disposition est présentée pour la première fois selon les codes de la C.P.I. Même si ce changement important comporte certains désavantages, comme celui de ne pouvoir retracer rapidement des données sur des produits particuliers, il présente cependant des avantages marqués en ce sens qu'il permet de grouper des produits connexes et facilite l'utilisation de ces données en rapport avec celles sur les importations et les exportations qui sont disposées de façon semblable.

La publication présente également pour la première fois des données sur les livraisons des produits par province. Ces nouveaux tableaux aideront nombre d'utilisateurs qui, auparavant, ne pouvaient obtenir de détails sur les livraisons au niveau provincial. Finalement, la publication paraît pour la première fois dans les deux langues.

Sources des données

Les données sur les produits publiées dans ce bulletin proviennent des déclarations des établissements pris en compte au recensement annuel des manufactures et des déclarations de certains établissements classés à d'autres industries, comme la construction et le commerce de gros dont l'activité principale n'est pas la fabrication mais qui néanmoins s'occupent d'une quelconque activité manufacturière. On a demandé à ce dernier groupe d'établissements de remplir un questionnaire spécial de produits présentant en détail les produits de propre fabrication vendus ou livrés en 1971.

Limites des données

Statistique Canada demande aux établissements manufacturiers d'indiquer les livraisons des produits qui figurent sur une liste donnée et qui sont communs à l'industrie. Les établissements doivent également fournir des renseignements sur tous les produits livrés qui ne paraissent pas sur la liste.

Dans le cas des petits établissements ou des produits de moindre importance que l'on retrouve dans des établissements plus grands, on a totalisé les valeurs dans la catégorie "tous autres" produits. Cette catégorie peut comprendre des produits qui figuraient sur le questionnaire envoyé à l'établissement mais que celui-ci n'a pas jugés suffisamment importants pour être indiqués séparément.

Users of the data contained in this report must be aware that not all shipments of a specific commodity may appear under the commodity item due to the above-mentioned considerations and due to the inability of respondents to report commodity detail in precise terms. Reporting or accounting practices may differ from establishment to establishment, leading to the same item being reported at different levels of the I.C.C. hierarchy. For example, one plant may be able to report "back bacon, smoked, sliced", whereas another can identify the commodity only in more general terms as "back bacon, smoked".

Confidentiality of Data

Limitations on the amount of detailed data that can be published frequently result from the secrecy provisions of the Statistics Act which prohibit the publication of information which can be related to any individual person, business or organization.

In order to establish what may be published and to prevent indirect (or residual) disclosure, choices must often be made between the publication or suppression of different levels (of the I.C.C.) of commodity data. Such decisions, necessary to comply with the Statistics Act, are made in such a manner as to permit publication of as much commodity detail as possible.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities of own manufacture shipped by establishments regardless of their industrial classification. Statistics on shipments of specific commodities from a particular industry are published in an annual report on that industry. Such reports are normally issued well in advance of *Products Shipped by Canadian Manufacturers* as the latter cannot be compiled until commodity data are available from all industries. In addition to showing data on shipments of commodities produced by establishments classified to a particular industry, these reports often include an all-industry table which provides total shipments data for selected commodities regardless of the producing industry.

Figures published in this report may not always agree with those shown in the "all-industry" tables of the individual industry reports primarily because the 1971 industry reports were completed well in advance of the implementation of the I.C.C. and commodities were sometimes identified or grouped differently.

¹ Statistics Canada: *Industrial Commodity Classification, Volume 1*, Catalogue 12-541.

Les utilisateurs des données publiées dans ce bulletin doivent se rappeler que les livraisons totales d'un produit particulier peuvent ne pas être présentées en raison des considérations susmentionnées et de l'incapacité des répondants de préciser chaque produit. Les méthodes de déclaration ou de comptabilisation peuvent différer d'un établissement à l'autre entraînant ainsi l'inscription du même article à des niveaux différents de la C.P.I. Par exemple, une usine peut indiquer "bacon de dos, fumé, en tranches", tandis qu'une autre identifiera le produit seulement en termes généraux comme "bacon de dos, fumé".

Confidentialité des données

Le nombre limité de données détaillées pouvant être publiées s'explique fréquemment par la règle de confidentialité énoncée dans la Loi sur la statistique qui interdit la publication de renseignements qui pourraient être rattachés à une personne, à une entreprise ou à un organisme.

Pour établir ce qui peut être publié et prévenir toute divulgation indirecte (ou par recoupement), on doit souvent choisir entre la publication ou la suppression de différents niveaux (de la C.P.I.) de données sur les produits. Ces décisions, nécessaires pour se conformer à la Loi sur la statistique, permettent de publier le plus de détails possible sur les produits.

Sources additionnelles de renseignements

Les données sur les livraisons figurant dans la présente publication regroupent les chiffres sur les produits de propre fabrication livrés par les établissements, indépendamment de leur classification industrielle. Les statistiques sur les livraisons de certains produits d'une industrie particulière paraissent dans une publication annuelle sur cette industrie. Ces publications sortent habituellement bien avant celle sur les *Produits livrés par les fabricants canadiens* puisqu'il faut attendre, pour compiler cette dernière, de recevoir les données de toutes les industries. En plus de présenter des données sur les livraisons de produits fabriqués par les établissements classés dans une industrie particulière, ces publications renferment souvent un tableau d'ensemble faisant état des données sur les livraisons totales de certains produits sans tenir compte de l'industrie productrice.

Les données figurant dans cette publication peuvent ne pas toujours correspondre avec celles du tableau "toutes industries" des bulletins individuels par industrie principalement à cause du fait que ces bulletins pour 1971 ont été terminés bien avant la mise en oeuvre de la C.P.I. et que les produits étaient quelquefois identifiés ou groupés différemment.

511112	UNIT CONVEYORS, POWERED				24,064	CONVOYEURS, MÉCANIQUES	511112
5111121	PNEUMATIC TUBE SYSTEMS				2,618	SYSTÈMES DE TUBES PNEUMATIQUES	5111121
5111124	STANDARD PACKAGE CONVEYORS, BELT, CHAIN AND POWERED ROLLER				4,022	CONVOYEURS ORDINAIRES, À COURROIE, À CHAÎNE OU À ROULEAUX MÉCANIQUES	5111124
51112	BULK CONVEYORS				24,835	CONVOYEURS EN VRAC	51112
5111211	BULK CONVEYORS, POWERED, BUCKET ELEVATOR, CHAIN AND BELT				395	CONVOYEURS EN VRAC, MÉCANIQUES, MONTE-CHARGE À GODET, À CHAÎNE ET À COURROIE	5111211
5111212	BULK CONVEYORS, POWERED, BELT				17,006	CONVOYEURS EN VRAC, MÉCANIQUES, À COURROIE	5111212
5111213	BULK CONVEYORS, POWERED, CHAIN				2,465	CONVOYEURS EN VRAC, MÉCANIQUES, À CHAÎNE	5111213
51112131	BULK CONVEYORS, POWERED, CHAIN, APRON FEEDERS				2,207	CONVOYEURS EN VRAC, MÉCANIQUES, À CHAÎNE, ALIMENTEURS À TABLIER MÉTALLIQUE	51112131
5111214	BULK CONVEYORS, POWERED, SCREW				1,539	CONVOYEURS EN VRAC, MÉCANIQUES, À VIS SANS FIN	5111214
5111215	BULK CONVEYORS, POWERED, VIBRATING AND OSCILLATING				2,052	CONVOYEURS EN VRAC, MÉCANIQUES, À SECOUSSES ET À OSCILLATIONS	5111215
51112152	BULK CONVEYORS, POWERED, VIBRATING FEEDERS				1,300	CONVOYEURS EN VRAC, MÉCANIQUES, ALIMENTEURS À SECOUSSES	51112152
5111219	BULK CONVEYORS, POWERED, N.E.S.				1,241	CONVOYEURS EN VRAC, MÉCANIQUES, N.D.A.	5111219
5112	PARTS FOR CONVEYORS AND CONVEYING SYSTEMS				6,005	PIÈCES DE CONVOYEURS ET D'ENSEMBLES CONVOYEURS	5112
51123	PARTS FOR BULK CONVEYORS, POWERED				5,070	PIÈCES DE CONVOYEURS EN VRAC, MÉCANIQUES	51123
511231	PARTS FOR BULK CONVEYORS, POWERED, BELT				3,115	PIÈCES DE CONVOYEURS EN VRAC, MÉCANIQUES, À COURROIE	511231
511232	PARTS FOR BULK CONVEYORS, POWERED, BUCKET ELEVATOR				157	PIÈCES DE CONVOYEURS EN VRAC, MÉCANIQUES, MONTE CHARGE À GODETS	511232
512	ELEVATORS AND ESCALATORS (EXCL. CONSTRUCTION AND MINING INDUSTRY TYPES)				105,679	ASCENSEURS, ÉLEVATEURS, ET ESCALIERS MÉCANIQUES (SAUF DE CHANTIER ET DE MINE)	512
5121	ELEVATORS AND ESCALATORS				83,057	ASCENSEURS, ÉLEVATEURS ET ESCALIERS MÉCANIQUES	5121
512111	ELEVATORS, PASSENGER, ELECTRIC AND HYDRAULIC				65,389	ASCENSEURS, ÉLECTRIQUES ET HYDRAULIQUES	512111
5122	PARTS FOR ELEVATORS AND ESCALATORS				22,622	PIÈCES D'ASCENSEURS, D'ÉLEVATEURS ET D'ESCALIERS MÉCANIQUES	5122
513	HOISTING MACHINERY				58,742	MACHINES DE LEVAGE	513
